■ Expected use

This manual describes as decentralized input and output modules for connecting to an industrial network.

■ Installation and start-up

Precautions!

Installation and start-up may only be performed by trained personnel. A qualified individual is one who is familiar with the installation and operation of the product and has the necessary qualifications to perform such operations. Any damage caused by unauthorized operation or illegal and improper use is not covered by the manufacturer's warranty. The equipment operator is responsible for ensuring that appropriate safety and accident prevention regulations are observed.

■ Corrosion resistance

Precautions!

FNI modules generally have good chemical and oil resistance. When used in corrosive media (e.g. high concentrations of chemicals, oils, lubricants, coolants and other material media (i.e. very low water content), these media must be checked before the corresponding application material compatibility. If a module fails or is damaged due to this corrosive medium, a defect claim cannot be made.

■ Dangerous voltage

Precautions!

Disconnect all power before using the device!

■ General security

Debugging and inspection	Fault	Owner/Operator Obligations	Expected use
Before debugging, read the user manual carefully.	If the defect or equipment failure cannot be corrected, the operation of the equipment must be stopped to avoid damage that may be caused by unauthorized use.	This equipment is an EMC Class A compliant product. This device produces RF noise.	The warranty and limited liability statement provided by the manufacturer does not cover damage caused by: ·Unauthorized tampering ·Improper use operation ·The instructions provided in the user manual explain the use, installation and handling of discrepancy
This system cannot be used in an environment where the safety of personnel depends on the functionality of the equipment.	Only after the housing is fully installed can the intended use be assured.	The owner/operator must take appropriate precautions to use this equipment. This device can only use the power supply that matches this device, and can only connect cables approved for application.

Sensor wiring requirements:

1. Sensor 2-wire type:

- a.Pin1、2 Short-circuit the positive terminal of the sensor
- b.Pin3、4 Short-circuit the negative electrode of the sensor

2、Sensor 3-wire type:

a.Pin1 and 2 are short-circuited to the positive electrode of the sensor.

b.Pin3 is connected to the negative pole of the sensor

c.Pin4 is connected to the negative pole of the sensor

3、Sensor 4-wire type:

a.Pin1 is connected to the positive pole of the sensor

b.Pin2 is connected to the positive pole of the sensor

c.Pin3 is connected to the negative pole of the sensor

d.Pin4 is connected to the negative pole of the sensor.

2.3 Status LED meter

Module total indicator light:

LED	State	Function
1	Closure	Module power supply abnormality
1	Green light is always on	Module power supply is normal
2	Closure	*Spare
3	Closure	Module exception
3	Green slow flash	IOLINK communication failed
3	Green pulse flash	IOLINK communication successful

Analog input port:

LED	State	Function
4	Closure	No analog signal input
4	Yellow	Analog signal input is valid
4	Red	Analog signal input short circuit
5	Closure	*Spare

2.4 Mechanical dimensions

Project	Specification
Dimensions (Width xHeight x Depth)	65MMx153.4MMx29MM

3.IO-Link data

3.1 Communication parameters

Data transmission baud rate	COM2 (38.4kbit/s)
Frame type	2.V
Minimum cycle time	3ms
Process data cycle time	3ms, consistent with the minimum cycle time
Process data length	16 bytes input
